## Consumer Safety: Dietary

## The Global Leader In Contract Microbial Reduction Services

Sterigenics.

# Consumer Safety: Dietary

## MAJOR MARKETS:

- > Animal Nutrition
- > Herbs & Extracts
- > Cosmetic
- > Raw Material
- > Packaging
- > Dietary\*

## KEY BENEFITS:

- > Leading choice for micro reduction
- > Non-invasive process
- > Penetrates various packaging
- > No residuals

*\*As permitted by country, and subject to US FDA export requirements.*

## WHAT IT IS:

Sterigenics is the world leader in high quality microbial reduction services. Gamma irradiation is the preferred technology used on dietary, botanical, herb and nutraceutical products. Products that are treated at our world-wide facilities accept dietary products that are for export only, unless for the purposes of animal nutrition or cosmetics.

Using Cobalt 60 as a resource, the gamma sterilization process kills microorganisms. It is a non-invasive process and will penetrate various types of packaging. Post irradiation, there are no residuals left on the product, and the sterilization process is safe and effective.
